

**IN THE SPECIFICATION**

**Page 4, second paragraph, please amend as follows:**

The track has an inner side 112 which displays a series of longitudinally spaced drive lugs 113 for engagement with drive wheels (not shown) associated with the suspension assembly of track-propelled vehicles, and an outer side 114 which displays a series of longitudinally spaced laterally extending profiles 116, 118 and 120. As you can see in figure 4, the profiles differ in configuration from one profile to the other. However, in this embodiment the opposite lateral portions have the same configuration.
